CHOCOGAS

This strain stands out for being a very rewarding variety to grow, with excellent resistance to pests and the ability to produce highly productive yields without the need for complex nutrient regimes, making it an ideal choice for both novice growers and more experienced growers.

During flowering, it develops very compact and heavy buds, with an abundant production of resin that covers the flowers from the early stages. Its buds are hard, dense and very resinous with slight purple hues. Aromatically, it has a very distinct profile of sweet gas, intense and persistent, which leaves a clear impression both fresh and after curing, combined with more chocolatey undertones that give it a 'pastry' touch.

Thanks to its high cannabinoid content, it is ideal for any type of extraction, whether dry, with water, or for making tinctures and creams.

SANATIVA CBD AUTO

Sanativa CBD Auto is an Indica-dominant autoflowering strain developed for those seeking a balanced cannabinoid profile and an easy-to-grow plant.

Unlike other autoflowers, it is a very productive plant, with a robust, branching structure, short internodes and a bushy habit. Under optimal conditions, it can yield over 450 g per plant and reach up to 180cm in height outdoors. It is recommended to lightly prune the larger leaves if they are shading other branches.

Its aromatic profile stands out for being sweet with citrus notes. Upon closer inspection, earthy and slightly spicy nuances emerge, adding depth to the overall experience. On the palate, it offers a smooth and creamy flavour with sweet notes.

One of the most interesting aspects of this strain is its cannabinoid profile, designed for those seeking a milder, more functional experience. It features moderate THC levels (4-8%), combined with a high CBD content (12-15%), producing a balanced, relaxing and clear effect, ideal for therapeutic use or for consumers who prefer more controlled, less cerebral sensations.

BIORELIEF CBD

BioRelief CBD is a strain that stands out for its balance between flavour, aroma and a smooth effect thanks to its high CBD content. It comes from the cross between the famous Bluehell CBD and a pure CBD strain, achieving a genetics with great indica dominance. This combination guarantees not only an exceptional aromatic profile, but also a therapeutic effect without the strong psychoactive effect of THC. The influence of Bluehell CBD provides that characteristic sweet and fruity fragrance, while the addition of Pure CBD genetics stabilises the cannabinoid levels for a more functional consumption without the side effects typical of high THC strains.

As for its structure, it is a robust, medium-sized plant, with a compact morphology and wide leaves of intense green tones. It is ideal for growing both indoors and outdoors, reaching manageable heights and producing dense, resinous buds in just 7/8 weeks of flowering. Outdoors, it thrives in temperate, sunny climates, offering generous harvests in mid-September. Its resistance to mould and pests makes it an excellent choice for both novice and experienced growers.

The organoleptic characteristics of BioRelief CBD are another of its great attractions. It offers a heady aroma reminiscent of freshly baked muffins with hints of sweet blueberries and earthy touches. On the palate, the sweet and fruity flavour is maintained, providing a gourmet experience. Its effects are smooth, relaxing and without a psychoactive feeling, thanks to its high CBD content. It is ideal for relieving stress, anxiety or mild pain, offering mental and physical well-being without altering mental clarity, making it perfect for daytime use.

BLUEHELL CBD

Bluehell CBD was created to offer another version of our famous Bluehell strain, but this time with a very high CBD content and almost residual THC. It has a compact and well branched growth with large dark green leaves. It has a large long and compact central bud so most of the time it is good to stake it. An easy to grow plant perfect for novice growers. Its aroma is typical of Blueberry strains, with a strong smell of berries. On the palate, the taste reflects sweet and sour tones reminiscent of sugary berry treats. Thanks to its very high percentage of CBD, its effect is not psychoactive, but it maintains the “therapeutic” effects without associated side effects, such as red eyes, dry mouth, psychedelic effect, etc. Ideal for making all kinds of tinctures, oils, creams, etc.

ELIXIR VITAE CBD

Elixir Vitae CBD comes from crossing our own Medical CBD with the Jean Dark CBD, famous, for its strong CBD content, and for having a more complex terpene profile. It combines caramel aroma with a bittersweet touch. Due to its high CBD:THC ratio, its effect is non-psychoactive, keeping its “therapeutic” value, with no side effects, like reddening of the eyes, dry mouth, psychedelic effects, etc. It is perfect for tinctures, oils, creams, butter, etc.

It has an Indica hybrid structure, and the flowering period tends to last around 55 and 60 days on average. It is a very beautiful plant, as it forms rose and/or violet pistils, that make this lady look spectacular.

MEDICAL GRAPE CBD

Medical Grape CBD is the result of the search for a plant with a very special flavour and aroma, and at the same time with very high CBD and an almost residual THC content. It has a very vigorous growth and is a very easy to grow plant. Ideal for those looking for easy and productive plants. It has good branching and is a very high yielding plant, giving its maximum yield when grown directly to the ground. Its flowers are large and long, so it is advisable to secure them firmly with stakes or a netting system. Its aroma has hints of grape and cream reminiscent of cake. It has a mix of sweet and earthy flavours, combining the cake notes with a very pronounced earthy aftertaste. Medical Grape CBD is a perfect plant for making all kinds of CBD products like creams, tinctures, oils, etc. Its effect is not psychoactive, but it maintains the “therapeutic” effects without associated side effects, such as red eyes, dry mouth, psychedelic effect, etc.

OG KUSH CBD

After years of hard work we finally achieved a cross that will turn heads in the medicinal field, combining the well know therapeutic qualities of OG Kush with high levels of CBD. Some phenotypes produce CBD levels that double the THC levels (ratio: 1:2) making it possible to maximise dosage levels while minimizing the psychoactive effects, a great companion for daily functional use.

Also a great choice for making therapeutic oils and creams for oral or topical use.

The plant's structure consists of large, light green leaves, generous branches with a lot of internodal distance.

When grown indoors, the use of tutors or SCROG/SOG is recommended to maximize yield.

In an outdoor setting the plant will require a lot of direct sunlight to assure large yields, to reach yields that surpass the kilo mark, the plant should be grown directly on soil.

The buds are very tight and resin filled with hints of lemon, wood, earthy tones and gasoil.

RECOVERY CBD

Recovery CBD has the highest level of CBD among all our plants. When cultivated under optimal conditions, the CBD levels can reach 21%, keeping THC levels between 0,15% and 0,30%. Crossing our own Medical CBD with a Therapy CBD, our goal was to increase to the maximum the CBD concentration levels.

The flowering period is short, around 60 days. Its buds are pyramidal shaped and filled with lots of resin. The terpene profile of the plant is mostly fruity, with earthy hints.

Due to its high CBD levels, the effect is non-psychoactive, keeping its therapeutic value, with no side effects, like reddening of the eyes, dry mouth, psychedelic effects, etc. All that makes it an ideal plant for tinctures, butter, creams, oils, etc

RED CROSS CBD

Red Cross CBD is a cross between our own Medical CBD with a Lambada CBD. Our intention was to reduce THC levels as much as possible, while increasing CBD levels. This strain usually contains less than 0,2% THC and between 6% and 9% CBD. Its effect is non-psychoactive, keeping its therapeutic value, with no side-effects, like reddening of the eyes, dry mouth, psychedelic experiences, etc.

It has the typical structure of a bushy Indica plant, and medium-low height. Its flowering cycle is very fast, and can be harvested after 55 days. Red Cross has an extraordinary terpene profile, with flavours going from sweet strawberry to floral scent.

Because of all this, it has a very high entourage effect, which means that the cannabinoids work in synergy with terpenes and flavonoids, to maximize cannabinoid's therapeutic effects.

STRAWBERRY CAKE CBD

Strawberry Cake CBD is a pure CBD strain with a 1/20 ratio (THC:CBD). It can reach up to 20% CBD, while keeping THC levels below 1%. With a sweet and fruity taste, this strain has an easy growth and high production potential. An ideal choice for those who are looking for cannabis with a therapeutic effect. This strain has a very fast growth and adapts very well to all types of cultivation. It has a good branching and produces long and very dense buds. Its production is very high, even for novice growers with little experience. Strawberry Cake CBD is a strain that has no psychoactive effects at all, and its very low THC content makes it an ideal choice for daytime consumption, for all those who like the taste and aroma of cannabis but are not looking for a mental high. Its flavour is fruity and has a very marked strawberry aroma.

SUPERFRUIT CBD

Superfruit CBD an exceptional and unique strain of cannabis. This hybrid is distinguished by its remarkable CBD content, making it a prized option for those seeking the therapeutic benefits of cannabis without the intense psychoactive effects.

As for the characteristics of the plant, it exhibits a robust structure with dense, resinous buds. Its leaves can show hues ranging from dark green to purple, inherited from genetics Cherry Pie. What. This strain is known for its resistance to pests and diseases, making it ideal for all types of growers. With a moderate flowering period, it offers very good indoor and outdoor productions.

The aroma and taste of Superfruit CBD are complex and captivating. What. With fruity, earthy notes, this variety awakens the senses. The terpene profile contributes to its appeal as well as its therapeutic effect, creating a symphony of fragrances that add an additional component to the consumer experience.

As for its effect, Superfruit CBD offers a relaxing and soothing experience, thanks to its high CBD content. Ideal for relieving stress and anxiety, many users also report a sense of mental clarity and focus. This variety is versatile, being an excellent choice for those seeking the medicinal benefits of cannabis without experiencing the psychoactive effects associated with high levels of THC. In short, Superfruit CBD stands out for its balance of attractive characteristics for all types of growers, sweet and fruity flavour profile and remarkable therapeutic effects.

Y GRIEGA CBD

Strain with 1:1 ratio (THC:CBD). Levels can vary from 4% to 10%, always with a 1:1 ratio present. Y CBD is a strain suitable for those who don't want or can't tolerate high THC levels. It is especially recommended for those who are not looking for a cerebral high but rather a body relaxing effect. Very suitable for making creams, tinctures and other therapeutic consumables, due to its moderate psychoactive effect. At a morphological level, it is a robust plant with wide leaves and vigorous growth. Indoors, we do not recommend growing more than 16 plants/m². Outdoors it can grow over 2 metres high, it is harvested at the end of October and its production is high. It prefers organic nutrients over mineral nutrients, improving not only in flavour and aroma but also in yield. Its flavour and aroma is between acid and musky with hints of lemon

Y GRIEGA CBD 2.0

After lots of hard work, crossing and interbreeding our Y Griega CBD, we successfully developed a strain with very high levels of CBD, and low THC levels that are mostly below 0,3%. After lots of crosses with the very known Cherry Wine CBD, we managed to keep this strain's features on all its different phenotypes. This makes this genetic a good choice for people looking to complement some medical treatments. Due to its low THC levels, it is recommended to all kind of users, including old people, people with no experience, or people with low tolerance levels. As it has no psychoactive effect, this plant is suitable for the making of tinctures, edibles, and oils. The plant's structure is similar to Y Griega CBD, but there has been an improvement on the production of buds and trichomes. The aroma and flavor still have strong citrus hints, with nuances of Sweet wine and cherry. To enhance the flavour and aroma of Y Griega CBD 2.0, we strongly recommend the use of organic nutrients over mineral ones.

EBOSHI CBG

Polyhybrid developed from a selection of strains from the Swiss and Italian Alps, with high CBG, crossed to stabilize the offspring and to increase the CBG to the maximum. Eboshi CBD can reach up to 15% of CBG, and both THC and CBD remain with very low values, almost residual, always below 0,2% each. It is a plant of indica structure, with short internodal distance, good branching and which produces large and compact flowers. It has great vegetative vigor and great resistance to fungi. It is perfect for humid climates. It is also ideal for CBG extracts. Its flavor and aroma have citric touches with fruity and humid earthy undertones.

1024

We are extremely proud of this cross! 1024 combines everything you could ever desire: taste, production, presence... it's the perfect plant!!! It adapts perfectly to all growing methods (organic, coco, hydroponics...). When cultivated under optimal conditions, the THC levels can be very high, therefore it's not recommended for the novice smokers.

Defining its taste is not an easy task as it combines a diverse array of flavors (sweet, musky, spicy, fruity...) plus a more acid phenotype with hints of incense.

From now on, you will start hearing a lot more about 1024.

2046

Selected for its incredible psychedelic powers and indisputable Haze aroma, 2046 is the most powerful strain in our seed bank. Patience is needed to grow this lady, but you will be generously rewarded after 15-16 weeks, depending on the phenotype, the most psychedelic phenotype the longer duration. Cultivation can be complicated; it should only be grown in S.C.R.O.G. or in high-ceiling grow rooms fastened with ties for support. Therefore we do not recommend this strain for amateur growers. This plant, grown under optimum conditions, can become one of the greatest pleasures for any cannabis grower. It has a potent and energetic high that combines perfectly with an intense Haze flavor, making it the perfect gift for your taste buds. It's also recommended as a medical complement for diseases requiring high levels of THC as glaucoma. Enjoy 2046!

BCN SOUR DIESEL

BCN Sour Diesel comes from one of the finest genetic families available in cannabis market, originally a pure Sativa, it has a clear potent high, euphoric but not too cerebral making it the perfect “all day” partner.

We crossed our best and mass-produced Indica with our Sour Diesel to increase production and shorten the flowering period. This plant is strong and polyvalent suitable for indoor and outdoor cultivation, because of its capacity to withstand plagues and great calyx to leaf ratio. Not to mention Sour Diesel's distinct tropical fruity flavor, this can be greatly enhanced by organic cultivation. With this said Sour Diesel is a great all around package, strong, polyvalent, great tasting and a large yielder, which is hard to find in Sativas.

JACK LA MOTA

This variety is possibly the best-known in the international cannabis scene. It was created in honor of, the well known hemp activist, Jack Herrer. Jack La Mota is ideal for S.C.R.O.G. Cultivation, producing long and compact buds with an intense incense aroma that will take you back to its ancestral' roots.

Jack La Mota's euphoric high is very active, a real mind stimulating bomb! To maximize its yield, it should be grown in a hydroponic set-up, which produces a high calyx-leaf ratio. Because of this, it's highly valued as an outdoor cultivation plant, for it will save you time when trimming and manicuring.

Enjoy this treasure!!!

MALAKOFF

Malakoff is a dream come true for all Sativa lovers out there! This hybrid has a short flowering period and is mold resistant, making it suitable for outdoor cultivation in high humidity environments. Recommended for the experienced grower; because of its vigorous growth the slightest distraction at the beginning of the flowering period can stress the plant, make it grow out of control and possibly delay the flowering period.

Malakoff's strong cerebral high is ideal for those seeking a creative and energizing effect. Its distinctive taste combines the citrus fruity flavor typical to Sativas' with a touch of strawberries and cream, that will leave your mouth watering!

As well as the "Y Griega" and "2046" strains, Malakoff is a plant suitable for diseases that require high levels of THC as glaucoma.

Y GRIEGA

Y Griega's growth starts with such dramatic force that it is highly recommended to grow it in S.C.R.O.G., to make it more manageable.

Unlike other Sativas, this plant has a surprisingly vigorous production of buds; very large and extremely resinous, covering all the stems. In a recent Gas Chromatography analysis by CANNA Research, "Y GRIEGA" obtained the highest level of THC among all our plants. This plant maintains the classic haze scent while combining it with a slightly sweet flavor, which makes it stand out from the rest.

Its effects begin with a jolt of energy that slowly mellow down to an overall feeling of relaxation yet you remain alert, recommended for diseases requiring high levels of THC, like glaucoma.

BANANA PURP

Crossing of the famous Banana OG, known worldwide for its ripe banana flavour and aroma, with the famous Purple Punch 2.0. Banana Purp is a slender variety with good branching. It is a good choice for growing in SOG or SCROG as it has a lot of vigour and can multiply its size once it goes into flowering. Outdoors, pruning is recommended to give it a bushier shape and to increase its production. It has large, hard, and resin-filled buds. It is ideal for extractions of all kinds. The flavour and effect combines the ripe bananas of Banana OG with the grapey notes and berry flavour of Purple Punch 2.0. Its effect is characterised by an initial euphoric effect, which quickly turns into relaxation and physical well-being.

BANANA ZKITTLEZ

Banana Zkittlez mixes two of the tastiest and sweetest strains available. It's the fruit of our selection from Banana Punch (Symbiotic Genetics), for its particular and intense ripe banana flavour, and its buds hard as rocks, interbred with the very renowned Zkittlez cut, recognized as a multiple award-winner in the USA, and famous for its extraordinary taste and aroma that combines citrus touches such as grapefruit and lime, with notes of wild berries. With this cross, we have managed to maximize the deep flavour from its Zkittlez parent, adding hints of banana that enhance its taste and aroma, delighting the most demanding connoisseurs out there.

At a structural level, we worked to obtain more compact and resinous buds, in order to increase the final yield.

Its THC levels can be very high, reaching 20%, making it a good choice for creams, oils or tinctures. The effects start with a strong, cerebral high, that quickly turns into a deep state of relaxation, ending with a long lasting narcotic high.

CANADIAN KUSH 2.0

This plant is the fruit of a very special selection from our Canadian Kush, interbred with the American strain Casey Jones, which belongs to our private selection. The result is an improved Canadian Kush with far more strength and a much higher productivity. Its growth is vigorous and has a highly ramified structure, requiring some pruning when in indoor crops, specially at the lower parts. It yields high density roundly shaped buds, which are totally covered in resin. It is an ideal plant for both mechanically performed and solvent produced extractions, due to its great payback. Its taste is a mixture of humid soil and slightly spicy touches. Its effect is powerful, relaxing and long lasting, therefore, it is not recommended for inexperienced smokers.

CHANNEL+

Channel+ is a variety with enormous aroma, amazing bouquet and it's perfect for S.C.R.O.G. cultivation. It grows like a Sativa, thin and without many leaves. When flowering, it still grows taller but keeps a compact shape, like an Indica.

Channel+ is a very fast finisher and is suitable for all kinds of growers and growing systems.

Brilliant as a mother due to the fast-rooting clones it produces.

Extraordinary mental effect with a very pleasant physical one thanks to its levels of cannabinoids.

Used in the medicinal field to treat chronic aches and injuries; like multiple sclerosis and fibromyalgia, among other diseases.

COOKIES PURPLE PUNCH

A very special cross between two genetics from the USA. On the one hand, a Purple Punch 2.0 male which improves vigour and structure, creating a stronger plant with stiffer branches and that increases production without problems of bent or even broken branches due to the weight of the buds. And on the other hand, a GMO Cookies female, popularly known as Garlic Cookies, for its particular garlic aroma and semi-spicy nuances. This plant has very resinous buds with different colour shades that go from dark green to blue/purple. The flavour and aroma of this variety, as we have said, are quite curious and one can smell tones of garlic, onion and mushrooms, but once in the mouth they are not very strong or unpleasant, but on the contrary, they become a mixture of rainforest with spicy tones that make it very pleasant to smoke. It is a good choice for lovers of new flavours. Its effect is clearly indica, strong and very relaxing and it is popularly used for problems such as chronic pain, insomnia and to treat different types of inflammation.

DEVIL FRUIT

Although our Devil Fruit hybrid has the typical Indica plant structure, its Sativa heritage causes the flowering cycle to be a bit longer than usual, finishing in about 8-9 weeks when planted indoors. Maximum yield is best achieved under optimal lighting conditions; otherwise the plant will produce too many leaves.

Its effects derived from its Indica roots, which begin with a mellow cerebral high that will quickly transport you into a pleasant state of relaxation without any heaviness, an excellent source of creativity and perfect when performing tasks.

Because of its extremely sweet flavor, Devil Fruit's taste is the most distinguished and desired quality of the plant. This variety is perfect for those who truly value the importance of taste.

GELATO 242

This plant is the result of a cross between two very popular genetics brought from the USA. On the one hand, Gelato 41, that is a cross between Sunset Sherbert and Girl Scout Cookies Thin Mint, known for its exquisite flavour and aroma, and on the other hand, Dosidos, that is a cross between Girl Scout Cookies and Face Off OG, known for its high THC content and special flavour which combines sweetness and creaminess with mentholated. It is a strain with good vigour and high production. It has a robust, pyramidal shape. In addition, it has chromatic tones that give rise to buds with different shades of purple/red/pink. It has a very good calyx/leaf ratio, so it is also a good plant for outdoor growing, as it does not have many leaves.

It is an ideal plant for lovers of good taste because it combines the sweetness and creaminess of Gelato 41 with the incredible bouquet of Dosidos, and makes the flavour remain in the mouth for a long time after consumption. It has a clear and powerful relaxing effect and generally induces physical well-being.

GRAPE FUEL

Medical Seeds is pleased to present our newest crossover of Grape Pie and Jet Fuel Gelato. This hybrid will captivate connoisseurs and enthusiasts alike with its complex terpene profile and potent effect.

From the point of view of its cultivation, Grape Fuel it exhibits characteristics that make it an attractive choice for growers of all levels. This cannabis plant tends to develop thick, resinous buds, adorned with shiny trichomes that testify to their power. Your resistance to pests and diseases, combined with a relatively short flowering period, makes it easy to handle both indoors and outdoors.

In terms of flavor, the genetics of Grape Pie provide a distinctive, fruity taste reminiscent of ripe and sweet grapes. This flavor blends harmoniously with the characteristic intensity of Jet Fuel Gelato, a strain known for its potency and brain-boosting effect.

As for the scent, Grape Fuel emanates an intoxicating bouquet that mixes sweet and fruity notes with earthy and combustible nuances. This complex aroma is just a prelude to the smoking experience, where flavors unfold in layers, delighting the palate with each sip.

In terms of effects, Grape Fuel tends to induce an initial feeling of euphoria and mental clarity, followed by gradual physical relaxation. This a balanced combination of sativa and indica makes it a versatile option, suitable for both creative and social moments and relaxing at the end of the day.

MEDICAL DONUTS

Our feminized version of a very interesting cross between a Gelato 41 and a Holy Moly! that is triumphing due to its terpene profile and its balanced effect between physical and mental. This plant has a slender structure with good lateral branching. Its production is medium/high, it has a fast growth and a flowering time of around 60 days. It produces dense and very resinous buds, with colours that can vary between vibrant green and purple, depending on the phenotypes. It responds very well both indoors and outdoors, making it a very versatile plant. Its flavour is one of the qualities that has made it so sought after by growers all over the world as it combines the creamy sweetness of Gelato 41 with the fruity and earthy notes of Holy Moly. The blend of the two offers notes of icing sugar, cream and butter, with hints of tropical fruits and an earthy finish. The aroma is sweet with hints of "gas", which combines with hints of ripe fruits and hints of pine or earth. Its effect is characterised by an initial euphoria thanks to the influence of Gelato 41. It usually starts with a surge of happiness and mental relaxation, ideal for relieving stress or anxiety and then moves into a state of deep relaxation. As the effects progress, the indica influence of both genetics comes through, providing a feeling of body calm and mild sedation. It is an ideal strain for afternoon or evening use, as it can be a bit heavy for daytime activities. Many users report its effects as an adjuvant for the relief of muscular or chronic pain, migraines or inflammation. It is also used to combat insomnia and to help reduce stress and anxiety.

MEDICAL RUNNTZ

The feminized version of the well-known american clone Runntz. By combining two of the best recent strains from the United States, Zkittlez and Gelato, Medical Runntz was born. By adding the OG Kush male, we managed to improve the structure and the growth of this peculiar strain, while keeping the aroma, smell and power practically intact. Runntz combines the candy flavor of Zkittlez with vanilla ice cream notes of Gelato. It is a fast growing and compact plant which produces very resinous buds in only 60 days. It adapts very well to SOG and SCROG systems. Its organoleptic qualities increase if the cultivation is made with organic methods. Like Gelato, the Runntz strain offers very peculiar tones in its flowers. Its effect is well-balanced, and produces a very pleasant physical well-being, combined with a nice mental high that invites to develop any creative task. Its sweet and intense flavor of candy with a very long aftertaste of cake make it a very special and characteristic strain.

MENDOCINO CHANEL KUSH

We are delighted to present an excellent new hybrid we have been developing throughout the past few years. It is the result of crossing our own Mendocino Purple Kush selection with a Channel+ which had been specially picked by the great Bitox growers; and later crossed once more with a Purple Kush brought along with us from our trips to the United States. The outcome was a plant of outstanding fast growth, extraordinary vigour, and great production, both resin-wise and in regards to the amounts produced. Its large buds are covered with resin and give off a great aroma. Its taste is fulfilling from the very fast draught, with a dominant earthy tang and noticeable hints of sweet grape. Its effect is powerful, narcotic and relaxing. It is also suitable for all kinds of extractions, since its productivity is so high.

MENDOCINO PURPLE KUSH

This plant is a cross between 2 mythical strains: Mendocino Purple, a.k.a “Mendocino Purps” or “Purps”, originally from Mendocino, Humboldt County (California) and the notorious Purple Kush, famous, for its strong narcotic high, trademark purple colored buds covered in resin and incredible earthy flavor. It is a long bearing plant, robust and with very large leaves, when grown indoors we recommend the SCROG system due its big size. It's very important not to over feed this plant; symptoms will show immediately, so it's important to control the amount of nutrients in the soil when adding liquid fertilizers. There are 4 phenotypes that give this plant its spectacular color pallet, which ranges from green to intense violets. The aromas will oscillate between the intense earthy tones typical of Purple Kush (purple buds) to the sweeter touches of the Mendocino Purple (green buds). The greener plants usually end their flowering periods 5 to 7 days earlier.

MINTZKITTLEZ

As a result of the collaboration with Grand Cru Genetics and Heads Research we are pleased to present this variety that will not leave anyone indifferent. It is the crossing of the famous Orange mintz x TMZ (Too Much Zkittlez) and results in a variety with very fruity flavours and aromas that are a delight to the palate.

Its structure is a medium sized plant with very resinous flowers and purple tones in some of its phenotypes. It performs very well both outdoors and indoors, but it is indoors where it reaches its maximum potential. A SOG or SCROG are very good for increasing its production and getting the maximum yield.

In one of its phenotypes its flavour combines the citrus and menthol flavours of Orange Mintz with the fruity sweetness of Too Much Zkittlez. The result of this mix is a plant with dominant notes of fresh orange, lemon and mint with hints of sweet berries. And then it has another profile that is a little more 'fizzy' with hints of 'garlic' which gives it an exquisite and very original profile. Ideal for those looking for a fruity flavour profile with an earthy but equally sweet finish. Its aroma is refreshing and complex, with earthy and sweet hints.

NO NAME

No Name has the typical structure of a Sativa plant except it doesn't have a long flowering period. We achieved this through a careful cross with and old Sensi Star, which helped reduce the flowering period to 7.5-9 weeks.

To maximize production and intensify the plants powerful flavor we recommend planting No Name directly into the ground (soil) as opposed to pots.

This sweet lady inherited the characteristic flavor of "Cheese" with a distinctive sweet touch of licorice, making it widely appreciated!

No Name will start with a strong cerebral high and rapidly becomes a very strong physical one. Due to its strong physical sensation it may induce a state of total relaxation and sleepiness, making it ideal to treat insomnia.

PINK SHERBERT

The result of combining the exquisite Pink Guava with the renowned Oz Kush, also known as Rainbow Kush, is this fusion that gives life to a plant that offers a unique experience in terms of taste, aroma and effect.

The Pink Sherbert is a robust, compact cannabis plant, ideal for growers of all levels. Its structure is strong and robust, with a lot of vigor. It produces dense buds that, when mature, display an attractive color palette. The Pink Sherbert shows a notable resistance to pests and diseases, highlighting its reliability and promising abundant harvests for those who cultivate it. As far as flavour characteristics are concerned Pink Sherbert don't let me down. The influence of the Pink Guava brings sweet and fruity notes, with shades of ripe berries and citrus that add a refreshing touch to each catch. On the other hand, Oz Kush adds an earthy and spicy touch, creating a fusion of complex and delicious flavors.

The aroma of the Pink Sherbert is equally captivating. An intoxicating fragrance of tropical fruit and fresh earth emanates from the buds, filling the surrounding space with their distinctive presence.

In terms of effect, the Pink Sherbert offers the best of both worlds. The Pink Guava provides an elevated and energetic brain sensation, while the Oz Kush contributes to deep body relaxation. This balanced combination creates an effect that's perfect for any time of day, whether it's stimulating creativity or relaxing at the end of the day. A variety that will leave no one indifferent.

PROZACK

Prozack is a relatively compact and small bushy plant. There are two phenotypes, one characterized by its rock solid medium size buds and the other for its giant fluffier buds. The genetics of this plant come from the crossing of a famous Dutch variety, a multiple cup winner, with our best Kush. These varieties were selected and combined to increase production without jeopardizing its characteristic organoleptic properties. This plant requires a longer vegetative period in comparison with other varieties in our collection, because of its slow growth when it starts to flower. However it is perfect for the production of hash, because of the large amount of resin it produces. Its high quality hashish taste combined with a long-lasting stoned effect makes it a true delight. This plant is known for its medical attributes a long side with channel+ they have a long time history in the treatment of various diseases.

SOUR GLUE

As an outcome of our travels, we have managed to successfully interbreed two of the most lately acclaimed genetics in the United States, resulting in a plant of delightful flavour, as well as suitable for all kinds of extractions. Its growth is extraordinary fast, therefore it requires a short growth period in indoor crops, and it guarantees big size plants in outdoor crops. It must be taken into consideration that growth is also fast during the flowering period, tripling or even quadrupling its size along this stage. Its flowers are stodgy and give off a distinctive fuel/gas flavour and aroma with an intense aftertaste prevailing for a lengthy time after smoking. Its effect is euphoric to start with, and gradually fades away into a feeling of relaxation, both mental and physical.

WHITE WIDOW

White Widow is widely appreciated for its therapeutic properties. Due to its correct cannabinoid combinations, it has many medicinal qualities which make it suitable in the treatment of many illnesses and chronic pain due to injury. The S.O.G. growing technique is ideal for this variety; because the plant has a moderate growth, it's important not to let it reach the flowering stage before reaching 25 cm. or more. It's a great space saver, you can fit 25 to 30 plants in a square meter creating a compact and uniform green mass.

For outdoor cultivation we recommended early spring sowing to achieve maximum performance and yield.

The authentic acid yet sweet taste that fills your mouth mixed with the sharp fragrance in the air will remind you of the power of White Widow.

ZKITTLEZ

Zkittlez is a strain that became very famous in the USA after winning the Emerald Cup 2016 as well as the Cannabis Cup in Michigan and San Francisco. It is a robust and bushy plant. Its structure is indica, with great vigour in its growth. It makes a large central bud, as well as several side branches that also give large buds full of very scented resin. On an organoleptic level it is one of the best valued strains on the market because it has one of the most complex and special flavours so far. It evokes a tropical fruit cocktail where a large number of terpenes are combined to give rise to a very sweet and intense flavour that leaves no one indifferent. It is an ideal plant for extractions of all kinds, due to its large amount of terpenes that give very intense flavor and aroma. It has a rather active initial effect that leads to a state of relaxation both mentally and physically. It is also ideal for outdoor grows where its buds can take on even more complex aromatic nuances.

BLUEHELL AUTO

Recovered from our genetic reserve, we present our Bluehell variety in its new autoflowering version. Bluehell Auto is a cross between our private selection of Dj Short's original Blueberry and Auto Medical Ruderalis. Because it's an easy plant to grow its perfect for beginners, offseason growing and intense non-stop grows. Ideal for early harvest in nordic climates and for growing during the winter in warm climates.

The effect is a mellow, relaxed narcotic high, suitable for daily activities. The flavor and aroma take us back to Bluehell, with its clear nuances of wild berries a true ode to its Blueberry heritage.

COOKIES SHERBERT AUTO

Cookies Sherbert Auto combines the best of two of the most prestigious strains of the USA. It is a cross with good vegetative vigor, with a slender structure and very compact buds, filled with abundant resin containing high levels of THC. Its cultivation is very easy, making it suitable both for indoor and outdoor growing. Its growth is fast and it is advisable to transplant it to its final pot as soon as possible, in order to optimize its performance to the maximum. It will show blue tones if temperatures are not too high. Its taste reminds perfectly of ice-cream with hints of cookie dough. Its psychological effect is mostly active and energetic, although it is combined with a very pleasant physical effect. Actually, it is one of the best automatic strains in the market.

NO NAME AUTO

From one of our seedbank's top varieties when it comes to plant structure, flavor and aroma, we present No Name Auto, our own autoflowering version of No Name. This medium sized plant with tight, compact, super aromatic and resin filled buds will give autoflowering plants a new meaning. No Name Auto, like its predecessor is a straightforward and easy plant to grow, just make sure she gets the nutrient rich soil she loves. The effects start with a euphoric high that slowly gives way to total relaxation and tranquility. Flavor wise it's a complex mixture of cured cheese and old school skunk, characteristics that make its aroma and flavor unique and exquisite.

DEEP NEVILLE REGULAR

Because of the professionalization of the sector, we decided to go back to the roots and launch a regular strain. We decided to cross the famous Neville's Haze from the 90' and a Deep Chunk father from the private selection of an experienced breeder, whom we thank, for his will to share. Out of this merger our Deep Neville Regular is born, a plant with intense green foliage and purple traces typical of the father's side. When separating the males from the female it is important to be careful because some of the males might flower at the same time as the females. Usually, the male flowers will start to show in the shape of little balls in the nodes a few days before the females start showing their sex. The buds are not extremely big but they are very compact, full of resin and show dark and purple touches. The Flavor is hard to describe because the metallic lemon flavor of the Neville's Haze get intensified by the father's earthier tones. None the less the intensified lemon flavor and high psychoactive power will be a treat for those looking for a high THC level strain.

The effect is immediate and highly energetic, not recommended for amateur smokers or those suffering from anxiety. It's a great plant to make cannabic olive oil, because it will help in reducing nausea and other chemotherapy side effects as well as help to build appetite.
